A CLOSER LOOK AT REMOTE VIEWING

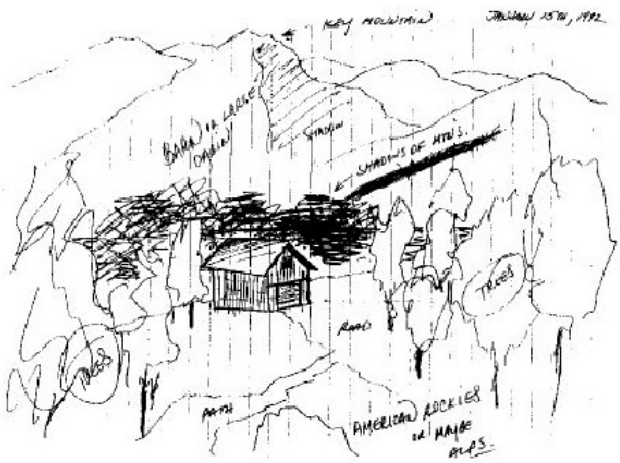
You're probably no stranger to the concept of remote viewing. Most likely you recognize the possibility of perceiving objects and events distant in space and time. You may have experienced episodes of spontaneous *knowing* or *seeing*.

But what defines remote viewing? What distinguishes it from other types of psi phenomena?

Wikipedia reports, "**The term ['remote viewing'] was coined in the 1970s by Russell Targ and Harold Puthoff, parapsychology researchers at Stanford Research Institute, to distinguish it from clairvoyance.**"

According to the International Remote Viewing Association (**IRVA**), "Remote viewing is a mental faculty that allows a perceiver (a 'viewer') to describe or give details about a target that is inaccessible to normal senses...."

From TMI's perspective, the value of remote viewing lies in the objective nature of the process itself; a protocoldriven, scientifically tested perceptual technique and/or experience designed to acquire and describe information seemingly separated from the "viewer" and his or her physical senses by distance, shielding, or time.



Remote viewing target drawn by Joe McMoneagle

Through remote viewing, out-of-body experiences, spiritual insight, or miraculous healing we recognize, at some level of awareness, the true nature of ourselves as individual sentient elements of a greater non-local consciousness.

To discover what remote viewing means to you, we invite you to, as Bob Monroe used to say, **Come and find out for yourself**!
